

## Electromagnetic Pig Locating

### Introduction

Confirm the location of a pig with pinpoint accuracy with Online's Electromagnetic Pig Locating systems

Online's electromagnetic transmitter and receiver systems enable quick and accurate locating and tracking of a stuck pipeline pig in a topside or subsea pipeline and with any pipeline medium. Electromagnetic technology is also effective in underground pipelines and pipeline bundles. ATEX certified options allow use in hazardous environments such as live platforms.

#### Electromagnetic Transmitters

Online's series of electromagnetic transmitters allow for precise validation of a stuck pig's location and as a contingency method of confirming launch and receipt of pipeline pigs.

#### Electromagnetic Receiver Systems

Online's electromagnetic receiver systems allow for quick and exact tracking and locating of pigs fitted with electromagnetic transmitters. The location of a stuck pig can be identified with onshore, ATEX and subsea diver and ROV options
